EDUCATION

Indian Institute of Information Technology (IIIT), Kottayam <i>Bachelor of Technology in Computer Science with Specialization in Cyber Security</i>	CGPA: 8.8/10 <i>Aug. 2023 – Present</i>
St. Antony's Public School, Anakkal, Kerala <i>Senior Secondary Education (CBSE)</i>	Grade: 95.8% <i>Jun. 2021 – Mar 2023</i>
Carmel CMI Public School, Vazhakulam, Kerala <i>Secondary Education (CBSE)</i>	Grade: 96.8% <i>Jun. 2010 – Mar 2021</i>

EXPERIENCE

Summer Intern; Ethical Hacking & Cybersecurity <i>Indian Institute of Technology (IIT), Jammu</i>	Jun. 2025 – Aug 2025 <i>Remote</i>
- Performed Vulnerability Assessment and Penetration Testing (VAPT) on web applications using Nmap, Burp Suite, Metasploit, and Wireshark to identify OWASP Top 10 vulnerabilities including SQL Injection, XSS, CSRF, IDOR, and Broken Authentication. - Built HexaScan, a modular Python based web vulnerability scanner capable of detecting XSS, SQLi, CSRF, IDOR, and session management flaws with automated report generation. - Conducted network reconnaissance, exploitation, and post exploitation analysis using Metasploit and Kali Linux while analyzing packet level threats via Wireshark. - Developed Python and Bash scripts to automate reconnaissance, vulnerability scanning, and security auditing workflows. - Completed Capture The Flag (CTF) challenges in cryptography, web exploitation, forensics, and reverse engineering to simulate real world attack scenarios.	

PROJECTS

HopAlong <i>React, Node.js, Express.js, PostgreSQL</i>	Jan. 2024 – Apr 2024
- Built a full stack carpooling web platform for IIIT Kottayam using a React SPA and a Node.js Express REST backend. - Integrated Maps and geolocation APIs for selecting pickup, drop, and route locations. - Restricted access using domain based authentication for <code>@iiitkottayam.ac.in</code> email IDs. - Designed PostgreSQL schemas for users, vehicles, rides, and bookings with relational constraints. - Implemented ride matching and seat allocation through transactional RESTful services.	
HexaScan <i>Python, OWASP Top 10, Web Security</i>	Jun. 2025 – Aug. 2025
- Built a modular Python based web vulnerability scanner to detect OWASP Top 10 issues including SQLi, XSS, CSRF, IDOR, and Broken Authentication. - Implemented automated HTTP request and response analysis to identify insecure inputs and session handling flaws. - Added brute force testing and structured report generation for repeatable security assessments. - Designed an extendable plugin style architecture to support new vulnerability modules.	

TECHNICAL SKILLS

Languages: Java, Python, C/C++, SQL (Postgres), JavaScript, HTML/CSS, TypeScript
Frameworks: React, Node.js, Flask, Express.js, Next.js, Django, Angular, FastAPI, TensorFlow, PyTorch
Databases: MySQL, MongoDB, Firebase, DynamoDB, Neo4j (Graph DB)
Tools: Git, Docker, Google Cloud Platform, VS Code, Visual Studio, PyCharm, Postman
Cybersecurity and Networking: Wireshark, Nmap, Metasploit, Burp Suite, John the Ripper, Hashcat, Hydra, Zphisher, SIEM(Spunk), Kali Linux, Parrot OS, OWASP ZAP
Libraries: pandas, NumPy, Matplotlib, scikit-learn, OpenCV, Seaborn, XGBoost
